

Roof Worker Back-Pack Kit

Product description

If you are a roof tiler, solar panel installer, plumber, electrician, builder, air conditioning installer or antenna installer or in a similar profession, you will have to work on a roof at some stage. Roof work, like any other work at height, is a risk and appropriate products and methods should be used to protect yourself and your workers.

The Roof Worker's kit has been designed specifically for workers in situations where roof work is required. An easy all in one kit, that packs neatly and easily into a back-pack for transportation and relocating from site to site. This kit is also perfect for general work at height situations in the construction and maintenance industries.

FEATURES

- Compact kit packed into a convenient back -pack for easy transportation.
- Suits most roofing height situations
- Polyester Construction Harness with frontal fall arrest points.
- Type 1 anchorage device runs along the length of the taut rope easily, allowing for greater movement and accessibility to working areas.
- 2m webbing energy absorbing lanyard and webbing tie-off adaptor complete this kit.

APPLICATIONS

- Roof Work
- Construction
- Maintenance
