SafetyLink®
Innovative
Fall Protection

The Retro**Link** is an abseiling anchor point designed for use on metal roofing/steel purlin structure. Installation is a simple task requiring no access from underside of the roof.

The Retro**Tube** and Washer component can also be used as a versatile unit accommodating any 16mm threaded component.

Installation is a simple process requiring only one hole to be drilled into the roof sheeting and through the purlin, a waterproofing washer combined with an o ring seals the hole.

- Easy installation into concealed areas.
- Fits to steel columns and beams, no access is required.
- Versatile unit accommodating any 16mm threaded component.

Benefits of choosing SafetyLink:

The SafetyLink Patented Retro**Link** can be installed onto a metal C or Z purlin, where no access is available from underneath the roof. The SafetyLink Retro Eyebolt is tested to AS NZS 5532-2013 standards and rated to 15kN. It is designed to bend like a fishing pole reducing the load back on the structure and the person attached to the anchor.

- 316 stainless steel construction.
- Single person anchor.
- Multi-directional fall protection.
- Rated at 15kN.
- For use on metal roof/steel purlin structures.
- Fits to the pan of the roof sheeting.
- Anchor is energy absorbing and can be used for abseiling.

The anchor is an abseiling and fall arrest anchor with an unobtrusive design that requires no special tooling and minimal penetration to the roof sheeting.

SafetyLink will provide you with the following:

- All products tested and manufactured to Australian and New Zealand Standards.
- All distributors and installers are trained to use SafetyLink products.
- Supply installation guides, testing results and product sheets.
- Use a qualified and reputable testing authority.
- Supply a large range of roof anchors that protect you from the ground up, allowing complete access to your roof.
- Installers are qualified to do yearly inspections on your anchors as per Australian and New Zealand Standards.
